

1 Navy Case No. 82,918

2 ARRANGEMENT AND CONSTRUCTION OF AN  
3 ELEMENT BUNDLING MODULE

4 ABSTRACT OF THE DISCLOSURE

5 A plurality of elongated elements are anchored between discs retained within seal rings  
6 enclosing a chamber within a module housing. Such anchoring discs are formed within the seal  
7 rings with the elongated elements adjustably positioned therein between clamping plates by  
8 deposit and curing of epoxy resin. Such elements so bundled by the cured epoxy resin discs  
9 between a pair of the seal rings are then assembled within the module housing to seal the chamber  
10 thereby established therein.
